

DEEP ROOT DISTRIBUTION

The technology: Deep Root Irrigation puts water where plants expect it. Below.

Patented technology ensures that water percolates up to the roots. None is lost to surface runoff or evaporation.

Soil cross-section after 30 minutes with a DRI-12 unit.

The result is seen in a 30-minute side-by-side test using identical drip emitters. DRI's technology provides superior soil saturation.

Soil cross-section after 30 minutes with a surface drip unit.
